

# Journal of Proteomics & Bioinformatics

Open Access

[www.omicsonline.org](http://www.omicsonline.org)

Proteomics is a term in the study of genetics which refers to all the proteins expressed by a genome; proteomics involves the identification of proteins determination of their role in physiological and pathophysiological functions. Bioinformatics is the analysis of biological information using computers and statistical techniques, Bioinformatics is more of a tool than a discipline, the tools for analysis of Biological Data.

In Proteomics Bioinformatics, expert researchers explore this ever-changing field, providing the reader with a mix of review and methodology chapters which address the fundamentals of analysis methods, algorithms, data standards and databases. This supports the journals which publishes original research articles in all areas of experiment and applied proteomics bioinformatics. In past years Journal of proteomics & bioinformatics has been showing tremendous citations and articles focusing the most advanced research trends.

The JPB under the open access category is much more improved than the traditional publications. It allows the free, faster and unconstrained access to the scientific research and their results. The scientists, who needs change (or) are excited about the changes, now prefer the open access journals/publications than the routine to magnify and pass around their knowledge. JPB encourages and also depends upon data interpretation, efforts and analysis of proteome data using the bioinformatics solutions (tools and inbuilt concepts) and conceptual advances in protein biology.

Journal of Proteomics & Bioinformatics - Open Access uses online manuscript submission, review and tracking systems for quality and quick review processing. Submit your manuscript at

<http://www.omicsonline.org/submission>
