Allergy is a hypersensitive reaction of the immune system produced by several origins such as environmental factors, drugs, foods. The journal presents a spectrum of exciting approaches in allergy research with the new strategies in diagnosis, therapy and prevention of allergic diseases.

Journals under an Open Access category projects a comparatively new model for scholarly journal publishing that provides straight away, worldwide, barrier-free access to the full-text of all published articles. Journal of Allergy & Therapy is an Open Access, peer-reviewed, online journal that addresses all clinical and molecular aspects of allergic disease and their therapies. This is fulfilled by the publication of timely reviews, case reports and research studies that furnish insights into the molecular and clinical basis of allergic disease with their therapies.

Journal of Allergy & Therapy functions as an educational resource for students of higher education and postdoctoral fellows who are interested in allergic and immunological disease and their therapies. Reviews of these articles will help clinicians to learn and share their experiences and understand the advances in this area. Moreover, this journal is Open Access, and the content is free and promptly available; allowing scientists, physicians and students around the globe to share their research and innovations for the advancement of this area.

Journal of Allergy & Therapy - Open Access uses online manuscript submission, review and tracking systems for quality and quick review processing. Submit your manuscript at
