Biosensors and Bioelectronics are the applications of the electronics to biology and medicine. As we know, Biosensor is an analytical device that combines biological component with physicochemical detector. Some of the best examples of Bioelectronics are cardiac pacemaker, blood glucose meter and magnetic resonance imaging. The field of Bioelectronics comprises the subjects of electrical engineering, biology, physics, chemistry and materials science. The electronic gadgets plays key role in measuring the biological systems and revolutionized the methods of diagnosis.

The Journal of Biosensors and Bioelectronics is an international, peer-viewed journal that publishes the experimentally proven information of highly qualified manuscripts. This Journal of Biosensors and Bioelectronics explores the new paths of research to bring out magnificent gadgets to substitute doctors. The articles with highly qualified data is available to all the readers around the world through our Open Access system.

The Journal of Biosensors and Bioelectronics elaborates the importance and the vital applications of bio-gadgets in various fields. It gives the detailed information about working procedures of various Bioelectronics, innovation in the working procedures, and use of different biomaterials. Biosensors and Bioelectronics helps in automation of prosthetics, this technology has become boon to the physically handicapped. Our Journal provides guidelines for various in vivo and in vitro testing methods in support of manufacturers. The Journal of Biosensors and Bioelectronics dealing with high quality articles in innovative fields got international reputation and out of scientific interest it is open to all the viewers across the world.

Journal of Biosensors & Bioelectronics - Open Access uses online manuscript submission, review and tracking systems for quality and quick review processing. Submit your manuscript at
