

Economy with Socio-effective rights

Professor Andrew Keay*

Professor University of Leeds United Kingdom.

The article demonstrates that despite their transformative potential socioeconomic rights are complicit too, and not victims of, the disengagement of the needs they represent.

The rights are one & only realistic policy instrumentals to address deprivation of socio-economic needs, we should not surrender rights, but rather seek to turn theoretical socio-economic protections into functional legal rights.

Firstly, this path leads to add to the global debates about the practicality and efficacy of social justice by socioeconomic equality.

Secondly, recognizing through intrinsic barriers to this initiative are visible but are often ignored.

Rights-talk enables people to affirm that rights holders have intrinsic worth and to offer their demands to appease their material needs which would otherwise be overshadowed political legitimacy.

How the South African Constitutional Court had enforced the justiciable socio-economic rights jurisprudence has received a fair measure of praise for affirming the justice of these rights?

Article talks about the closer consideration of how the Court procedures his inquiry into socio-economic obligations, the discourse on socio-economic rights are not based on the interests which led to the incorporation of socio-economic justice into the text of the constitution.

Such study describes the way that society uses discourse on rights to control and eradicate social movements, as the representation of a political, social, and economic status quo.

Conceptually empty articulation of social interests, which enables structural confinement and removal of their desires, remains a significant additional impediment.

The protections of socioeconomic rights alongside civil and political rights will combat many of liberal rights vulnerabilities (as mentioned by CLS scholars).

By providing enforceable access to goods and services which are essential to human survival and growth, socio-economic rights appear capable of bringing the concept of rights and needs into productive harmony.

Ensuring socio-economic rights contributes to achieving a society that is ultimately fairer and that respects and confirms equal human dignity for all citizens.

Liberty may be applied, first, in marginalizing social power systems and secondly, in sabotaging state efforts to achieve equal equality, to problems confronting disadvantaged sections of society.

Socio-economic rights are only valuable to rights bearers if rights can improve physically their lives tangibly.
