Introduction

Oral hygiene is the practice of keeping one's mouth clean and free of disease and other problems by regular brushing of the teeth and cleaning between the teeth. It is important that oral hygiene be carried out on a regular basis to enable prevention of dental disease and bad breath. The most common types of dental disease are tooth decay (cavities, dental caries) and gum diseases, including gingivitis, and periodontitis. Journal of Oral Hygiene and Health (JOHH) has successfully published its 9th volume and released 3 issues during mid-2021 with no delay. I am pleased to mention that we are going to release new issue (volume 9, issue 4) by the end of May 2021. Our journal is having 84.15 as Index-Copernicus value and 0.72* as its impact factor. Additionally, our journal has both NLM as well as International standard serial number (ISSN) respectively, where NLM ID is 101647653 and ISSN is 2332-0702. JOHH consist several editorial members from various geographical areas. More than 60 well recognized professionals were acting as editorial board committee throughout the globe. More than 160 articles in the mode of review, research articles, short communications, case reports, mini reviews, etc. were submitted. Acceptance or rejection of article will be informed to author in the span of 21 to 30 days of early submission while the result of preliminary quality check will be approved in 24 to 48 hours of the submission. JOHH has offered whatsapp contact number and mentioned it in journal home page for easy understanding of author's queries to the editorial board members or editorial assistance. Review tracking as well as editorial tracking system has been introduced to track the submitted manuscript by the authors,

publishers, and editors respectively. Authors and editor can easily track the status of their submitted manuscripts by using journal credentials provided to the author during the submission time. JOHH has tried hard to obtain quality articles relevant to dental topics which include plaque, gum infections, gum bleeding, dental fillings, Endodontic and many more. Up to the middle of 2021, JOHH has chosen to utilize social media platform like twitter as well as linked in to have easy and friendly communication with authors, reviewers, and editors, public as well as well recognized professionals. Journal has got more positive responses and followers in social media as the latest updates and related oral care issues are posted on the daily basis. This process is still continuing and getting wider responses from throughout the globe. Our journal is having more than 1500 readers throughout the globe and this will be probable with open access journals. Major countries such as Japan, United Kingdom, United States, India, Egypt, Pakistan and many more are visiting our JOHH domain to know more about current research works in this particular area. For the upcoming volume 9 and issue 4 of JOHH, we are going to provide the same feature just like previous 3 issues of 9th volume during the year mid-2021. We will try to coin a special issue within the scope of journal by taking the necessary help from Editorial team. I would like to thank the office bearers for their hard-core support to carry out another new issue in the volume 9 i.e., Volume 9 issue 4 within the scheduled time. We promise our readers that we will do our best and release more volumes and issues with in the interest and knowledgeable areas by the year 2021 respectively.
