

## Non-surgical hair-restoration

**Chernykh Volodymyr**

*European Wellness Academy, Malaysia*

### Abstract:

The face is one of the essential stimuli, carrying social meaning and a primary means of social communication. This is how we interact with a world and how the world interacts with us. A person's traits and expressions blend to create one's unique self-identity and form the essence of the individual. Every person has their perception of self-image and an ideal aesthetic outlook for him or herself. Latest scientific studies are shaping a new reality of beauty, one founded on biologic and evolutionary and findings that link our fascination with beauty to our reproductive success. Everyone wants to meet expectations on their appearance. And the development of aesthetic science, itself, may be an ongoing part of our biologic adaptation today. With new innovative technologies and procedures, there are numerous options for each patient to maintain their attractiveness and beauty that range from office procedures to operative techniques. The appearance of wrinkles depends not only on our skin itself, but on deep structural components as well, like the soft tissues, fat deposits, and the skull that is subject to bone resorption. If we understand the way these things work, we can slow down aging.

### Biography:

Dr. Vladimir Chernykh completed his specialization in Dermatology and subspecialized in Aesthetic Dermatology. He discovered his strong inclination and passion towards Anti-Aging Medicine and started to participate in

professional trainings and master-classes in Aesthetics. As a professional in the anti-aging industry today, he has been actively travelling around the world being involved in various international seminars, conferences, workshops and meetings to further enhance his knowledge and expertise in the anti-aging industry.
