

Prediction of environmental indicators in land leveling using artificial intelligence techniques

Isham Alzoubi

Department of Surveying and Geometric Engineering, Engineering Faculty, University of Tehran, Iran

Abstract

Land leveling is one of the most important steps in soil preparation for agricultural and other purposes. . New techniques based on artificial intelligence, such as Artificial Neural Network, integrating Artificial Neural Network and Imperialist Competitive Algorithm (ICA-ANN), or Genetic Algorithms (GA-ANN), or Particle Swarm Optimization (PSO-ANN) have been employed for developing predictive models to estimate the energy related parameters and the results were compared to SPSS and Sensitivity Analysis results. In this study, several soil properties such as cut/fill volume, compressibility factor, specific gravity, moisture content, slope of the area, sand percent, and swelling index were measured and their effects on energy consumption were investigated. Totally 90 samples were collected from 3 land areas by grid size of 20m×20m. The aim of this work was to develop predictive models based on artificial intelligence techniques to predict the environmental indicators of land leveling .

Biography:

Isham alzoubi has completed his PhD at the age of 27 years from Doctor of Philosophy Degree in Agricultural Mechanization Engineering (University of Tehran – Iran) University and Postdoctoral Studies from School of Surveying Geospatial Engineering-Department of Surveying and Geomatics Engineering, University of Tehran. Current Job: General commission for scientific Agricultural Research – Damascus – Syria (Mechanical Engineer) He has published

more than 16 papers in reputed journals and has been serving as an editorial board member of repute.

Speaker Publications:

1. “Modeling and predict environmental indicators for land leveling using adaptive neuro-fuzzy inference system (ANFIS), and regression”
2. “Effect of Soil properties for Prediction of Energy consumption in Land Leveling Irrigation”
- 3.” Comparing ANFIS and integrating algorithm models (ICA-ANN, PSO-ANN, and GA-ANN) for prediction of energy consumption for irrigation land leveling”
4. “Integrating artificial neural network and imperialist competitive algorithm (ICA), to predict the energy consumption for land leveling”
