

Soft Tissue Esthetics

Sarah Feteih

King Faisal Specialist Hospital and Research Center (KFSHRC), KSA

Abstract

Esthetics or cosmetics is one of the leading topics today, as it has been globally significant in every aspect, starting from the smile area and more extensively over the body. It has been observed appealing to all age groups and of different ethnicities and of both genders, all over the media, in dental clinics and more. So, no doubt that esthetics is of great interest to each one of us, particularly with patients of such concerns, in regards to dental and/or smile esthetics.

In this webinar, we will be sharing cases of periodontal plastic surgeries, as in photos of the before and after surgeries, in relation to periodontal smile esthetics. As gingival esthetics along the supporting underlying bone plays an important role in the smile area, it is important to acknowledge the details of smile analysis. So, knowing where the root cause stems from, for example, with a gummy smile, whether it is a short upper lip, a maxillary growth issue, short teeth with excessive gingival display? or a combination of all!? Therefore, proper diagnosis is the key part of the proper future treatment plan, hence rewarding outcomes, and mostly resulting in patient satisfaction, which matters the most!

[35th International Conference on Dental and Oral Health;](#)
Webinar- June 15-16, 2020.
