In this issue Volume 12 Issue 9, our editorial board members have decided to release articles on the recent provoking incidents related to various types of addictions. For this issue, we are publishing one of the best articles entitled “Short Note on Alcohol Use Disorder Identification Test” by Ayaz Emre, “Impact of Drugs on the Human Body” by Elijah Tejada, “Food Additives and their Role in Addiction” by Evangeline Rose. In these articles, the authors have discussed the serious concerns and the recent trending topics in addiction research and therapy. Short Note on Alcohol Use Disorder Identification Test discusses the tools used to detect and screen alcohol consumption of a person during a period. This commentary article is very useful for the present and future generations and it brings awareness among the people who are addicted to alcohol, and other addictive substances. Impact of Drugs on the Human Body this article discusses various types of drugs available naturally and those which are produced under laboratory conditions. In this commentary article, the author details different reactions and side effects that are observed at various stages from addiction to recovery. Food Additives and their Role in Addiction is a trending topic and we expect more such articles as many people in the growing population are unaware of unhealthy and processed foods. As these processed and packaged foods consist of many additives and other food-grade preservatives which lead to substance addiction and other serious health disorders like obesity.

Our Journal's every single original copy is perused by a Senior Editor and those that are considered unmistakably uncompetitive or inadmis-

sible to the database, then the article will be declined without going to the full survey. This happens to around half of compositions. This interaction should take close to about 15-45 days. Original copies that pass this stage are forwarded to an Associate Editor who might return the article before audits in the event that the person recognizes genuine research work. In any case, the Associate Editor welcomes surveys and based on these makes a suggestion to the Senior Editor. In the event that the suggestion is to proceed with the survey interaction, the Senior Editor will send the original copy for a techniques/measurements audit. Following this, the Senior Editor will impart their choice to the authors, assessing the remarks and suggestions got from the Associate Editor and all analysts.

In case authors are welcome to update an original copy and resubmit it, they ought to present the changed form within about a month and a half. An expansion will generally be allowed whenever mentioned. A choice on the changed adaptation might be taken by the Senior Editor or the individual in question might counsel an Associate Editor or put the update through another full audit process, contingent upon the idea of the corrections that had been mentioned. A choice on the updated adaptation ought to regularly take less time than the first survey process. Analysts have the choice of unveiling their personality to the authors by adding their names to the lower part of their survey remarks. We support this in light of a legitimate concern for straightforwardness. We really love to hear from the authors if they could send their research papers related to extending the awareness of various addictive substances.
